PATENT

What is Claimed is:

- 1. A method for isolating human neuroepithelial precursor cells from human fetal tissue comprising:
- (a) culturing human fetal cells in fibroblast growth 5 factor and chick embryo extract; and
 - (b) immunodepleting from the cultured human fetal cells any cells expressing A2B5, NG2 and eNCAM so that an isolated population of human neuroepithelial precursor cells remains.
- 2. A method for transplanting an isolated population of human neuroepithelial precursor cells into an animal comprising:
- (a) isolating human neuroepithelial precursor cells from human fetal tissue in accordance with the method of15 claim 1; and
 - (b) transplanting the isolated human neuroepithelial precursor cells into the central nervous system of an animal.
- 3. A nonhuman animal model for study of
 transplantion of human neural stem cells into the central
 nervous system comprising a nonhuman animal transplanted
 with human neuroepithelial precursor cells isolated in
 accordance with the method of claim 1.
 - 4. A method for monitoring survival,
- proliferation, differentiation and migration of human neuroepithelial precursor cells in the animal model of claim 3 comprising detecting human specific NCAM, GFAP, human nuclear antigen and human mitochondria in the animal model.
